RESINA PER VERNICI

SANDRACCA

3223

Si tratta di una resina secreta dalla Thuja dell'Atlante il cui areale di vegetazione si trova nelle montagne dell'Algeria e del Marocco.

Anticamente usata come emostatico, dal '600 in poi viene adoperata nella preparazione di ottime vernici.

Si presenta come "lacrima" allungata colore giallo pallido, rivestita da polvere biancastra.

E' fragile e si sbriciola facilmente con frattura lucida e "vetrosa".

La Sandracca viene usata principalmente nella preparazione della "vernice mecca" e come finitura delle lacche, in quanto offre un film pellicolare vitreo, giallastro e piuttosto duro.

Può essere mescolata con la gommalacca poiché è solubile in alcool.

CARATTERISTICHE CHIMICO-FISICHE

Rammollisce a 100°

Punto di fusione: 130°

Solubile completamente in alcool etilico caldo

Solubile parzialmente in acquaragia e nell'acetone.

NOTE

Prima dell'utilizzo consultare le schede di sicurezza.
